#title Analysis of three nodD genes in Rhizobium leguminosarum
biovar phaseoli; nodD1 is preceded by nolE, a gene who
product is secreted from the cytoplasm.

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Fri Dec 18 18:12:41 1998; MasPar time 25.51 Seconds 998.601 Million cell updates/sec

Tabular output not generated.

Description: Perfect Score: Sequence: >US-08-951-733-14 (1-949) from US08951733.pep (1 of 2) 7113

1 HASGQRCVLLRTWEALAPAT.....PVEDEALGGTAFVQMPAHGL 949

Searched: PAM 150 Gap 11 74019 seqs, 26840295 residues

Scoring table:

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot35 1:swissprot

Statistics: Mean 54.986; Variance 96.850; scale 0.568

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-i- FUNCTION: INDUCES CARTILAGE AND BONE FORMATION. MAY BE THE
OSTEOINDUCTIVE FACTOR RESPONSIBLE FOR THE PHENOMENON OF
EPITHELIAL OSTEOGENESIS. PLAYS A ROLE IN CALCIUM REGULATION
AND BONE HOMOGIASIS (BY SIMILARITY).
-i- SUBUNIT: HOMODIMER, DISULFIDE-LINKED.
-i- DEVELOPMENTAL STAGE: EXTENSIVE EXPRESSION FOUND IN 8-DAY EMBRYOS,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       01-FEB-1994 (REL. 28, CREATED)

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 47.179; Variance 86.093; scale 0.548

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DR 491: 97-351066/32.

PR 49: 98-351066/32.

Re generate polyweride annincopolals etc. with altered pattern of proceeding and annincopolals etc. with altered pattern of process involved annincopolals etc. with altered pattern of process. It is one of 10 enzymes (see also M3974-15 and CC 4393-1-19yearse. It is one of 10 enzymes (see also M3974-15 and CC 4393-1-19 predicted to be involved in D-decomains or 1-sycarses to 10977-19, predicted to be involved in D-decomains or 1-sycarses concepts and attechment that have been identified from gene columns (77288 and 77285) of 5 acchanoplyspore erytheae. Novel C1970-91, nacrivating or augmenting the ery8 and/or eryC genes concoding these sugar blosynchesis enymes and introducing them into polymente producing microorganisms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ₹ ₽
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S Bacillus SP.

The gall gene product (P70274) is known as galactose-1-phosphate unidoltenssferase (transferase), the gall gene product (P70275) is known as unidolten diphosphatetoset 4-epimerase (ppimerase), and the galk gene product (P70275) is known as glinetase (Pimerase). And the galactokinase). The inventors claim an 1DAM molecula comprising all created of the septempres gal operon used for the expression of coreign bits in a transformed micro-oryanism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     375

A method is claimed for production of male sterile plants by reducing anther-specific occass activity. This can be accomplished by expressing in at least the anthers of a transgenic plant a Coass nucleic acid, preferably in antisense of crientation. Induction of male sterility can reduce hybrid plant production costs and enables production of hybrid plants with reduced and enables production of hybrid plants with reduced polline. It also enables production of plants where this with reduced polline formation, to reduce also give reactions to such plants or to accept the formation, to reduce also give reactions to such plants or to accept the formation, e.g. orchids. Lily CCASE (see W0010) has also been identified. 517 AA:
